

The History Object

[« Previous \(obj_screen.asp\)](#)[Next Reference » \(obj_location.asp\)](#)

History Object

The history object contains the URLs visited by the user (within a browser window).

The history object is part of the window object and is accessed through the window.history property.

Note: There is no public standard that applies to the history object, but all major browsers support it.

History Object Properties

Property	Description
length (prop_his_length.asp)	Returns the number of URLs in the history list

History Object Methods

Method	Description
back() (met_his_back.asp)	Loads the previous URL in the history list
forward() (met_his_forward.asp)	Loads the next URL in the history list
go() (met_his_go.asp)	Loads a specific URL from the history list
