

# HTML Global Attributes

[« Previous \(ref\\_byfunc.asp\)](#)[Next Reference » \(ref\\_eventattribute](#)

HTML attributes give elements meaning and context.

The global attributes below can be used on **any** HTML element.

## HTML Global Attributes

= Attribute added in HTML5.

Attribute	Description
accesskey (att_global_accesskey.asp)	Specifies a shortcut key to activate/focus an element
class (att_global_class.asp)	Specifies one or more classnames for an element (refers to a class in a style sheet)
contenteditable (att_global_contenteditable.asp)	Specifies whether the content of an element is editable or not
contextmenu (att_global_contextmenu.asp)	Specifies a context menu for an element. The context menu appears when a user right-clicks on the element
data-* (att_global_data.asp)	Used to store custom data private to the page or application
dir (att_global_dir.asp)	Specifies the text direction for the content in an element
draggable (att_global_draggable.asp)	Specifies whether an element is draggable or not
dropzone (att_global_dropzone.asp)	Specifies whether the dragged data is copied, moved, or linked, when dropped
hidden (att_global_hidden.asp)	Specifies that an element is not yet, or is no longer, relevant

id (att_global_id.asp)	Specifies a unique id for an element
lang (att_global_lang.asp)	Specifies the language of the element's content
spellcheck (att_global_spellcheck.asp)	Specifies whether the element is to have its spelling and grammar checked or not
style (att_global_style.asp)	Specifies an inline CSS style for an element
tabindex (att_global_tabindex.asp)	Specifies the tabbing order of an element
title (att_global_title.asp)	Specifies extra information about an element
translate (att_global_translate.asp)	Specifies whether the content of an element should be translated or not
